OUTPUT VOLTAGE (V)

SINGLE

15

GFM DC-DC Converter

PRELIMINARY 8 TO 50 VOLT INPUT - 30 WATT - HIGH EFFICIENCY

MIL-STD Pedigree. Exceptional Value.

FEATURES

- · High reliability
- Typical efficiency 90% or greater
- Up to 30 watts
- -55°C to +105°C operation
- Wide 8 to 50 volt input
- · Inhibit and sync functions
- Assembled in a MIL-PRF-38534 certified facility

PERFORMANCE QUALIFICATION

Qualified to MIL-PRF-38534, Group C

- Temperature cycle -55 to +105°C 10 times
- Constant Acceleration to 3000 g
- · Burn-in, 96 hours
- · Final electrical
- Gross and fine leak hermeticity test
- · Final visual

PACKAGING

- · Hermetically sealed, nickel plated, steel case
- · Compact footprint
- Typical case dimensions (see Figure 9 on page 7): 2.09 x 1.110 x 0.400 inches (53.09 x 28.19 x 10.16 mm)
- Weight: 55 grams max.

DESCRIPTION

Now, you don't need to compromise reliability to keep costs down. The GFM's innovative design combines the performance and efficiency you're looking for with Crane's legendary reliability and support. The GFM offers a high density footprint and is assembled in the same facility where Crane builds its ultra-reliable Class H and Class K products used on major space programs around the world. You can be confident that it provides the same documented quality and reliability of traditional converters costing more than double the price.

The Interpoint® GFM Series[™] is hermetically sealed in a steel case and is ideal for use in military jets, helicopters, commercial air, ground vehicles and low orbit satellites. The converters are screened to perform over the temperature range of -55°C to +105°C assuring reliable operation in the most demanding of environments.

They are ideal for use in programs requiring high reliability, small size, and high efficiency. The series offers a wide input voltage range of 8 to 50 volts with 80 volt transient for 50 ms.

PRELIMINARY 8 TO 50 VOLT INPUT - 30 WATT - HIGH EFFICIENCY

SENSE: VOLTAGE DROP COMPENSATION A special remote sensing feature maintains the desired output voltage at the load. See Figure 1.

FIGURE 1: SENSE CONNECTION TO COMPENSATE FOR VOLTAGE DROP

When the sense feature is not used, connect the sense lines to their respective output terminals. See Figure 2.

FIGURE 2: SENSE CONNECTION IF NOT USED

SENSE: OUTPUT VOLTAGE TRIM

The sense function is used to maintain the output voltage, compensating for voltage drops. The function can also be used to adjust the output voltage. Placing a resistor between one sense pin and the corresponding voltage will adjust the voltage up or down.

In the trim formulas, $V_{\mbox{OUT}}$ is the desired output voltage.

Trim Up

The maximum trim up voltage is to 17.25 volts. Connect a resistor ($R_{\rm T}$) between Trim and Sense Return. See Figure 3.

The formula for trimming up is R_T (kohm) = 201.5/(Vout-15.04)-91

NOTE: Do not exceed the maximum power rating when trimming up.

FIGURE 3: TRIM UP USING SENSE RETURN

Trim Down

The minimum trim down voltage is 12.75 volts. Connect a resistor (R_T) between Trim and Positive Sense. The minimum trim down R_T is 270 kohms. See Figure 4.

The formula for Rtrim to trim down is Rtrim (Kohm) =

NOTE: Do not exceed the maximum current rating when trimming down.

FIGURE 4: TRIM DOWN USING POSITIVE SENSE

| | IF NOT USED | LEAVE UNCONNECTED | | | |
| INHIBIT ACTIVE LOW (OUTPUT DISABLED) | INHIBIT PIN PULLED LOW ² | — | — | 0.8 | V |
| Do not apply a voltage to the inhibit pin $^{\rm 3}$ | INHIBIT PIN SOURCE | _ | _ | 4 | mA |
| | CURRENT ¹ | | | | |
| | REFERENCED TO | | INPUT | | ON |
| INHIBIT ACTIVE HIGH (OUTPUT ENABLED) | INHIBIT PIN CONDITION | OPEN COLLECTOR OR | | | |
| Do not apply a voltage to the inhibit pin ³ | | UNCONNECTED | | | |
| | OPEN PIN VOLTAGE ¹ | 4.6 | _ | 5.8 | V |

Notes

1. Guaranteed by characterization test and/or analysis. Not a production test.

Contracted by characterization too analysis, not a production too
 Tested with inhibit pin connected to input common.
 An external inhibit interface should be used to pull the inhibit low or leave

it floating. The inhibit pin can be left unconnected if not used.

| | 20 kHz to 20 MHz | / | 60 | _ | m/pp | |
| EFFICIENCY | | | 90 | _ | % | |
| LOAD FAULT ³ | POWER DISSIPATION | - | 2 | _ | W | |
| SHORT CIRCUIT | RECOVERY ¹ | — | 30 | - | ms | |
| STEP LOAD RESPONSE 3,4 | TRANSIENT | — | ±1500 | _ | mV pk | |
| 50% - 100% - 50% | RECOVERY | — | 3500 | _ | us | |
| STEP LINE RESPONSE 1, 3,5 | TRANSIENT | _ | ±800 | - | mV pk | |
| 16 - 50 -16 V | RECOVERY | — | 1300 | _ | μs | |
| START-UP ^{3, 6} | DELAY | _ | 30 | _ | ms | |
| FULL LOAD | OVERSHOOT ¹ | _ | 500 | _ | mV pk | |
| CAPACITIVE LOAD 7 | | _ | 500 | _ | uF | |

Notes

1. Guaranteed by characterization test and/or analysis. Not a production test.

2. Up to 80 volt transient for up to 50 ms.

3. Recovery and startup times are measured from application of the transient or change in condition to the point at which V_{OUT} is within 1% of final value. 4. Step load test is performed at 10 microseconds typical. 5. Step line test is performed at 100 microseconds ± 20 microseconds.

6. Tested on release from inhibit.

7. No effect on dc performance.
